

FISSURINA

Alan W. Archer

[From *Flora of Australia* volume 57 (2009)]

Fissurina Fée, Méth. Lich. 35 (1824); from the Latin *fissura* (a crack) and the suffix *-ina* (having the nature of), in reference to the slit-like lirellae of many species.

Type: *F. dumastii* Fée

Thallus pale yellow-brown to olive-green, usually smooth and glossy. Ascomata fissurine, usually simple, sometimes branched, immersed, sometimes opening and the lips thickening to form conspicuous lirellae. Proper exciple non-carbonised, yellow to dark orange-brown, sometimes becoming darkened laterally or apically, or absent. Hymenium not inspersed, I-. Ascospores usually 8 per ascus (all Australian species), oval or broadly ellipsoidal, narrowly ellipsoidal or rounded-oblong, hyaline, 4-locular, sometimes with a halo, or submuriform to muriform, I- or I+ pale to medium blue.

Chemistry: Lichen compounds absent, or psoromic acid, 2-methoxypsoromic acid or stictic acid present.

A widespread genus of 50–60 species; usually corticolous, rarely saxicolous. Ten species are known from Australia.

1	Thallus saxicolous	2
1:	Thallus corticolous	3
2:	Ascospores 12–16 µm long; lichen compounds absent (1).....	8. <i>F. praetermissa</i>
2:	Ascospores 16–20 µm long; psoromic acid present	10. <i>F. streimannii</i>
3:	Ascospores 4–10 × 2–4-locular (1:)	4
3:	Ascospores transversely 4-locular	6
4:	Lichen compounds absent; ascospores 21–28 µm long, 4–5 × 2–4-locular (3).....	4. <i>F. elaiocarpa</i>
4:	Lichen compounds present	5
5:	Ascospores 4–6 × 2-locular; thallus containing 2-methoxypsoromic acid (4:).....	9. <i>F. psoromica</i>
5:	Ascospores 8–10 × 2–3-locular; thallus containing stictic acid	1. <i>F. abdita</i>
6:	2-Methoxypsoromic acid present; ascospores 16–26 µm long (3:).....	5. <i>F. elixii</i>
6:	Lichen compounds absent	7
7:	Lirellae conspicuous, raised; ascospores 13–21 µm long (6:).....	6. <i>F. insidiosa</i>
7:	Lirellae inconspicuous, visible only as a slit	8
8:	Proper exciple darkened laterally; ascospores 10–11 µm long (7:)	2. <i>F. albonitens</i>
8:	Proper exciple not darkened laterally; ascospores 11–22 µm long	9
9:	Lirellae with a thin black margin (8:)	7. <i>F. nigirimis</i> var. <i>deficiens</i>
9:	Lirellae lacking a black margin.....	3. <i>F. dumastii</i>
